

Conduction-Cooled VME Processor & Receiver- CVAR

CVAR

This revolutionary single-chassis design with embedded sonobuoy receivers provides a powerful acoustic processor suitable for weight-critical applications. It also provides the option to integrate with a dipping sonar system.

General Dynamics Canada's sonobuoy acoustic processors are capable of processing any sonobuoy in fleet use today. Our scalable architecture allows processing for 16 sonobuoys of any mix, whether analog, digital, passive or active.

Features

- Functional features of UYS-504
- Embedded sonobuoy receivers
- Ruggedized, conduction-cooled chassis
- Supports embedded dipping sonar processing
- Suitable for MPA, helicopter and ship use
